ADVANCE[™]

40RLA 07-30 (Direct Expansion)
40RLS 08-30 (Chilled Water)
Packaged Air Handling Units with
Puron Advance[™] (R-454B) Refrigerant

Introducing Carrier's new Gemini™ 40RLA and 40RLS air-handling units. With DX cooling and chilled water variants, 40RL air handlers offer maximum performance and flexibility for even the most demanding jobs.

Carrier's easy-to install and economical 40RLA/S units provide reliable operation and versatility with:

- Puron Advance™ (R-454B) refrigerant on 40RLA models, which delivers a 75% reduction in global warming potential (GWP) compared to the original Puron refrigerant. Puron Advance's GWP of 466 easily exceeds the EPA (Environmental Protection Agency) requirement of <700 GWP
- Factory installed A2L leak detection system certified to UL 60335-2-40 to ensure reliable and safe indoor and outdoor unit operation (included on all 40RLA models)
- Multi-position designs for horizontal or vertical installation without modification
- Standard sloped drain pans and cleanable insulation
- Cooling coils with mechanically bonded fins for improved heat transfer and die-formed galvanized steel casings to provide durability and structural integrity available either painted or unpainted
- Standard factory-installed thermostatic expansion valves (TXV) with removable power element on 40RLA units
- Upgraded unit control board with intuitive indoor fan adjustment

- Standard Staged Air Volume (SAV™) system through our patented EcoBlue™ Direct Drive Vane Axial fan design (6-10 ton sizes) or factory installed and configured VFD (12.5 tons and up)
- Multiple fan static options to meet a wider range of applications
- Ultra Low Leak Economizer accessories to provide ventilation air and "free" cooling with built in Fault Detection and Diagnostic (FDD) capabilities
- Hot water coil, steam coil, and electric heat accessories

Indoor air quality features

The 40RL Series air handlers deliver clean, fresh, conditioned air to the occupied space through a unique combination of features:

- **Cooling Coils:** Prevent humidity build-up, even during part-load conditions. Units 6 to 8.5 tons use a single coil while units 10 tons and above feature dual-circuit face-split coils that can be manifolded together for single circuit operation.
- **Filters:** 2-inch (51 mm) disposable filters remove dust and airborne particles.
- **Pitched Drain Pan:** Adjustable for right-hand or left-hand connections to ensure positive drainage and prevent standing condensate.
- **Economizer Accessory:** Precisely controls the blend of outdoor and room air to achieve comfort levels and allow for free cooling when available. The Ultra Low Leak design meets California Title 24 section 140.4 requirements for return and outside air damper leakage. The controller meets California Title 24

Section 120.2 Fault Detection and Diagnostic (FDD) requirements.

Economy

The 40RL Series packaged air handlers offer low initial costs and continue to save money through reduced installation expenses and energy-efficient performance.

The multi-position design allows for quick installation in the horizontal or vertical (upflow) configuration without modifications. Drain-pan connections are available on both sides, and pans can be pitched for right-hand or left-hand operation with a simple adjustment.

Fan motors and contactors are pre-wired, and TXVs are factory-installed on 40RLA models to allow contractors to set up units faster and get on to the next job.

Precision balanced high efficiency EcoBlue Vane Axial fans or VFD controlled forward curved fan assemblies minimize air turbulence, surging, and unbalanced operation, reducing operating expenses over the unit lifetime.

Rugged dependability

The 40RL units are built to last with galvanized steel panels to ensure structural integrity under all operating conditions and mechanically bonded coil fins to provide improved heat transfer.

To ensure reliable fan operation, EcoBlue Vane Axial Fan or forward curved fan assemblies are securely mounted to a die-formed galvanized steel deck. For larger units - 40RL sizes 14 and up - the design includes rugged pillow-block bearings that are securely fastened to the solid steel fan shaft with split collets and clamp locking devices.

Coil flexibility

The 40RL air handling units offer flexible coil options for all job types. All units have inlet and outlet connections on the same end. Coil specific design features include:

- **AC Direct-Expansion (DX) Coils:** Designed for use with Puron Advance™ R-454B refrigerant, featuring copper tubes mechanically bonded to aluminum sine-wave fins. Includes factory-installed thermostatic expansion valves (TXVs) with matching distributor nozzles.
- **Chilled Water Coils:** 1/2 inch (12.7 mm) diameter copper tubes mechanically bonded to aluminum sine-wave fins. All chilled water coils have non-ferrous headers.

Easier installation and service

The multi-position design and component layout allow for quick unit installation and operation. There are simple, fast plug-in connections to the standard integrated unit control board (UCB). The UCB has clearly labeled connection points to reduce installation time. Also, a large control box provides room to work and mount Carrier accessory controls. The filters, motor, drive, TXVs, and coil connections are easily accessed by removing a single side panel.

EcoBlue™ Technology

The direct drive EcoBlue Technology indoor fan system on 6 to 10 ton 40RL units uses a Vane Axial fan design and

easily adjustable electronically commutated motor.

This design has 75% fewer moving parts, uses up to 40% less energy, and eliminates the need for fan belts, blower bearings or an additional shaft. The ECM motor offers internal protection from phase reversal and phase loss situations and comes in multiple static options to make air balancing at site easier than ever.

Easy to use

The newly re-designed Unit Control Board by Carrier puts all connections and troubleshooting points in one convenient place. Most low voltage connections are made to the same board, making it easy to access. Setting up the fan is simple by an intuitive switch and rotary dial arrangement.

Staged Air Volume (SAV™) system

Our SAV units will automatically adjust the indoor fan motor speed in sequence with the unit's cooling operation. Per ASHRAE®¹ 90.1 2010 standard section 6.4.3.10.b, during the first stage of cooling operation the fan motor (either ECM or controlled by VFD) will adjust to provide two-thirds of the total cfm established for the unit. When a call for the second stage of cooling is required, the fan motor will allow the total cfm (100%) established for the unit. During the heating mode the fan motor will allow total design cfm (100%) operation and during the ventilation mode the fan

motor will allow operation to two-thirds of total cfm.

Puron Advance features

In 2018, Carrier announced Puron Advance (R-454B) as our next generation refrigerant for light commercial products. With a GWP of 466 and similar working pressure and performance to R-410A, Puron Advance easily exceeds the EPA's new, stringent <700 GWP refrigerant requirement while minimizing unit redesign. Like other next generation refrigerants (R-32, etc.), R-454B is classified as an "A2L" refrigerant by ASHRAE (American Society of Heating, Refrigerating, and Air-Conditioning Engineers). This designation means that R-454B is "mildly flammable" under certain conditions. While this is a change from legacy "A1 — No Flame Propagation" refrigerants like Puron (R-410A), A2Ls are still very low on the flammability scale and quite safe for use. A2L refrigerants are difficult to ignite and have an extremely low flame speed — much less so than natural gas, propane, or even rubbing alcohol.

At Carrier, we are committed to safety. As such, all of our Puron Advance systems include a factory installed dissipation control board and leak sensor designed to last the lifetime of the unit. This system is certified to UL 60335-2-40 and designed to work right away, without any field configuration or major rewiring. In the event of a leak, these systems automatically identify and resolve the issue by dissipating the refrigerant to minimize risk to equipment, buildings, or occupants.

Factory-installed options

Adaptive dehumidification system (sizes 07-12)

Our adaptive dehumidification system is a factory-installed option for 6 to 10 ton 40RL units, offering year-round comfort and flexibility by providing an additional sub-cooling operating mode.

Sub-cooling mode will operate to satisfy part load type conditions when the space requires combined sensible and a higher proportion of latent load control.

NOTE: The system includes a Low Ambient controller.

Alternate fan motors and drives

Alternate fan motors and drives are available to provide the widest possible range of performance.

Pre-painted steel constructed units

Pre-painted units are available from the factory for applications that require painted units. Units are painted with American Sterling Gray color.

Staged Air Volume (SAV™) system

Our SAV units will automatically adjust the indoor fan motor speed in sequence with the unit's cooling operation. Per ASHRAE 90.1 2010 standard section 6.4.3.10.b, during the first stage of cooling operation the fan motor (either ECM or controlled by VFD) will adjust to provide two-thirds of the total cfm established for the unit. When a call for the second stage of cooling is required, the fan motor will allow the total cfm (100%) established for the unit. During the heating mode the fan motor will allow total design cfm (100%) operation and during the ventilation mode the fan motor will allow operation to two-thirds of total cfm.

Field-installed accessories

Optional VFD display kit (sizes 14-30)

There is an optional VFD display kit offered (as an accessory) for 40RLA units to allow the user to troubleshoot any VFD faults in the field after start-up.

NOTE: Do not use the VFD display kit to adjust the frequency and voltage in the VFD to required performance requirements. This could lead to decreased life of the motor and VFD.

Two-row hot water coils

Two-row hot water coils have copper tubes mechanically bonded to aluminum plate fins and non-ferrous headers.

One-row steam coil

One-row steam coils have copper tubes and aluminum fins. The Inner Distributing Tube (IDT) design provides uniform temperatures across the coil face. The steam coil has a broad operating pressure range; up to 20 psi (138 kPag) at 260°F (126°C). The IDT steam coils are especially suited to applications where sub-freezing air enters the unit.

Electric heater

Electric heaters are available as factory-supplied, field-installed accessories for nominal 240v, 480v, and 575v, 3-phase, 60 Hz units. Electric heaters are UL and CSA, agency-approved. They have single-point power wiring. The heater assembly includes contactors with 24-v coils, power wiring, 24-v control wiring terminal blocks, and a hinged access panel. Electric heaters should not be used with an air discharge plenum.

EconomizerONE

This ultra low leak, temperature dry bulb controlled economizer accessory comes with solid-state POL224 controller, gear-driven, modulating damper, and spring return actuator. It is supply/outdoor air sensors, and CO₂ sensor compatible, for use in electro-mechanical controls only. It also includes return and outside air damper leakage that meets California Title 24 section 140.4 requirements. Controller meets California Title 24 Section 120.2 Fault Detection and Diagnostic (FDD) requirements. Also meets AMCA Class 1A economizer damper test standards and labeling.

Discharge plenum

Discharge plenum directs the air discharge directly into the occupied space; integral horizontal and vertical louvers enable redirection of airflow. This accessory is available unpainted or painted. Field assembly is required (only applicable for vertical application).

Return-air grille

The return-air grille provides a protective barrier over the return-air opening and gives a finished appearance to units installed in the occupied space. This accessory is available unpainted or painted.

Overhead suspension package

The overhead suspension package includes necessary brackets to support units in horizontal ceiling installations.

CO₂ sensors

CO₂ sensors can be used in conjunction with the economizer accessory to help meet indoor air quality requirements. The sensor signals the economizer to open when the CO₂ level in the space exceeds the set point. A Carrier Comfort System programmable thermostat can be used to override the sensor if the outside-air temperature is too high or too low.

Condensate drain trap

The condensate drain trap includes an overflow shutoff switch that can be wired to turn off the unit if the trap

becomes plugged. Kit also includes a wire harness that can be connected to an alarm if desired. The transparent trap is designed for easy service and maintenance.

Discharge duct adapter (sizes 07-12)

This accessory is required for replacements using 40RL units with or without electric heat. It is not required for new installations or when using steam coil, hot water coil, or discharge plenum accessories.

7. T2 LOCATED IN HEAT SECTION.
8. FREEZE PROTECTION SWITCH NORMALLY CLOSED; WILL OPEN WHEN THE EVAPORATOR COIL IS FROZEN.
9. WIRING SHOWN IS FOR 2 STAGE UNIT; TO CONVERT TO 3 STAGE UNIT:
 1. MOVE ORN WIRE FROM T-STAT CB-12 TO T-STAT CB-2
 2. BLU WIRE BETWEEN T-STAT CB-12 AND 10CB-12
 3. MOVE ORN WIRE FROM T-STAT CB-12 TO 10CB-12
10. TERMINAL BOARD JUMPER 1, 2, AND 3 ARE CUT FOR REHEAT UNITS ONLY.

Unit Wiring Diagram — 40RL**14-30

Horizontal Installation — 40RL

LEGEND

NEC — National Electrical Code
TXV — Thermostatic Expansion Valve

NOTE(S):

- Field-supplied.
- Double riser may be required. Consult condensing unit product data catalog for details.
- All piping must follow standard refrigerant piping techniques. Refer to Carrier System Design Manual for details.
- All wiring must comply with the applicable local and national codes.
- Wiring and piping shown are general points-of-connection guides only and are not intended for, or to include all details for, a specific installation.
- Liquid line solenoid valve (solenoid drop control) is recommended to prevent refrigerant migration to the compressor.
- Internal factory-supplied TXVs not shown.

Vertical Installation — 40RL

LEGEND

NEC — National Electrical Code

TXV — Thermostatic Expansion Valve

LLSV — Liquid Line Solenoid Valve

NOTE(S):

- Field-supplied.
- Double riser may be required. Consult condensing unit product data catalog for details.
- All piping must follow standard refrigerant piping techniques. Refer to Carrier System Design Manual for details.
- All wiring must comply with the applicable local and national codes.
- Wiring and piping shown are general points-of-connection guides only and are not intended for, or to include all details for, a specific installation.
- Liquid line solenoid valve (solenoid drop control) is recommended to prevent refrigerant migration to the compressor.
- Internal factory-supplied TXVs not shown.

Wire Routing, Base Unit — 40RL

Wire Routing, Unit with Electrical Heat — 40RL

Optional adaptive dehumidification system

Units with the factory equipped dehumidification system option can provide a mode of improved dehumidification as a variation of the normal cooling cycle. The dehumidification system option includes an additional valve in the liquid line of the refrigerant circuit, a small reheat condenser coil downstream of the evaporator, and variable-speed control of some or all outdoor fans. Operation of the revised refrigerant circuit for each mode is described below.

The dehumidification system provides two sub-modes of operation: Cool and Reheat1:

Cool — provides a normal ratio of sensible and latent cooling effect from the evaporator coil.

Reheat1 — provides increased latent cooling while slightly reducing the sensible cooling effect. The Reheat1 mode is available when the unit is not in a Heating mode and when the Low Ambient Lockout switch is closed. Reheat1 mode will run with 2 different thermostat calls:

1. Cooling and Dehumidification until set point is reached
2. Dehumidification only until set point is reached, or return air is below 60°F. If the return air reaches below 60°F the unit will shut down until the return air gets above 65°F. This is to protect the unit from freezing, this safety will not affect the unit if there is a cooling call.

Refer to the following two figures for piping flow diagrams.

General fan performance notes

1. Interpolation is permissible. Do not extrapolate.
2. External static pressure is the static pressure difference between the return duct and the supply duct plus the static pressure caused by any FIOPs or accessories.
3. Tabular data accounts for pressure loss due to clean filters, unit casing, wet coils, and highest gas heat exchanger (when gas heat unit).
4. Factory options and accessories may effect static pressure losses. Selection software is available, through your salesperson, to help you select the best motor/drive combination for your application.
5. The fan performance tables offer motor/drive recommendations. In cases when two motor/drive combinations would work, Carrier recommends the lower horsepower option.
6. For information on the electrical properties of Carrier motors, please see the Electrical Data section of this book.
7. For more information on the performance limits of Carrier motors, see the Application Data section of this book.
8. The EPACT (Energy Policy Act of 1992, U.S.A.) regulates energy requirements for specific types of indoor fan motors. Motors regulated by EPACT include any general purpose, T-frame (three-digit, 143 and larger), single-speed, foot mounted, polyphase, squirrel cage induction motors of NEMA (National Electrical Manufacturers Association) design A and B, manufactured for use in the United States. Ranging from 1 to 200 Hp, these continuous-duty motors operate on 230 and 460 volt, 60 Hz power. If a motor does not fit into these specifications, the motor does not have to be replaced by an EPACT compliant energy-efficient motor. Variable-speed motors are exempt from EPACT compliance requirements.

NOTE(S):

- Maximum allowable fan speed is 1100 rpm for unit sizes 28 and 30; 1200 rpm for all other sizes.
- Underline indicates a field-supplied drive is required.
- Fan performance is based on deductions for wet coil, clean 2 in. filters, and unit casing. See page 59 for factory-supplied accessory filter pressure drop.
- For 60 Hz units, the medium-static drive and standard motor combination is not available for 28 size.

NOTE(S):

- The estimated sound power levels are based upon the ASHRAE calculation approach from the ASHRAE 1987 HVAC Systems and Applications handbook, Chapter 52.
- Since this data is calculated, these sound power levels may be different than the actual sound power levels.
- The acoustic center of the unit is located at the geometric center of the unit.

		62	271	204	237	187	201	168	160	149	127	127

NOTE(S):

- Ratings based on approximately 15°F superheat leaving coil.
- Direct interpolation is permissible. Do not extrapolate.
- Dashes indicate coil loading limits are exceeded.
- Evaporator fan heat not deducted from ratings.
- See dry and wet bulb formulas below.
- SHC is based on 80°F db temperature of air entering evaporator coil.

Dry and Wet Bulb Formulas:

$$\text{Leaving db} = \text{entering db} - \frac{\text{sensible heat capacity (Btuh)}}{1.1 \times \text{cfm}}$$

$$\text{Leaving wb} = \text{wet-bulb temperature corresponding to enthalpy of air leaving coil (h}_{\text{wb}}\text{)}$$

$$h_{\text{wb}} = h_{\text{ewb}} - \frac{\text{total capacity (Btuh)}}{4.5 \times \text{cfm}}$$

$$\text{where } h_{\text{wb}} = \text{enthalpy of air entering coil}$$

NOTE(S):

- a. Throw distances shown are for 75 fpm terminal velocity. Use the multipliers below to determine throw values for other terminal velocities.

TERMINAL VELOCITY (fpm)	THROW FACTOR
50	x 1.50
100	x 0.75
150	x 0.50

Legend and Notes for Electrical Data tables, pages 62-84

LEGEND

- FLA** — Full Load Amps
MCA — Minimum Circuit Amps
MOC — Maximum Operating Current (For Variable Frequency Drives)
MOCP — Maximum Overcurrent Protection (Amps)

NOTES:

- Electrical resistance heaters are rated at 240v, 480v, 575v. To determine heater capacity (kW) at unit nameplate multiply the 240v, 480v, or 575v capacity (kW) by the factor shown in the table below for the unit voltage.
- The following equation converts kW of heat energy to Btuh: kW x 3412 = Btuh.
- Heater contactor coils are 24v and require 8va holding current.
- Electric heaters are tested and UL approved at maximum total external static pressure of 1.9 in. wg.

$$\% \text{ Voltage Imbalance} = 100 \times \frac{\text{max voltage deviation from average voltage}}{\text{average voltage}}$$

Example: Supply voltage is 230-3-60

AB = 224-v
 BC = 231-v
 AC = 226-v

$$\text{Average Voltage} = \frac{(224 + 231 + 226)}{3} = \frac{681}{3} = 227$$

Determine maximum deviation from average voltage.

(AB) 227-224 = 3-v

(BC) 231-227 = 4-v

(AC) 227-226 = 1-v

Maximum deviation is 4-v.

Determine percent of voltage imbalance.

$$\% \text{ Voltage Imbalance} = 100 \times \frac{4}{227} = 1.76\%$$

This amount of phase imbalance is satisfactory as it is below the maximum allowable 2%.

IMPORTANT: If the supply voltage phase imbalance is more than 2%, contact your local electric utility company immediately.

NOTE(S):

- Installation with Accessory Electric Heaters: Size the Field Power Wiring between the heater TB1 and the 40RL indoor fan motor per NEC Article 430-28 (1) or (2) (depends on length of conduit between heater enclosure and 40RL power entry location). Install wires in field-installed conduit.
- Unbalanced 3-Phase Supply Voltage: Never operate a motor where a phase imbalance in supply voltage is greater than 2%. Use the formula in the example (see example below) to determine the percentage of voltage imbalance.
- Motors are designed for satisfactory operation within 10% of normal voltage shown. Voltages should not exceed the limits shown in the Voltage Limits column.
- Minimum circuit amps (MCA) and maximum overcurrent protection (MOCP) values are calculated in accordance with NEC Article 440.
- Motor FLA and VFD MOC values are established in accordance with Underwriters Laboratories (UL). Standard 60335-2-40.

LEGEND

TXV — Thermostatic Expansion Valve

Commercial Packaged Air-Handling Unit

HVAC Guide Specifications

Size Range: **6-10 Tons, Nominal Cooling**

Carrier Model Numbers: **40RLA (Direct-Expansion Coil) and 40RLS (Chilled Water Coil)**

Part 1 — General

1.01 System Description

- A. Indoor, packaged air-handling unit for use in commercial split systems. Unit shall have a multi-position design and shall be capable of horizontal or vertical installation on a floor or in a ceiling, with or without ductwork. (Only vertical units are to be applied without ductwork.)
- B. Unit with direct-expansion coil shall use Puron Advance™ (R-454B) in a refrigerant circuit with a matching air-cooled condensing unit. Unit with chilled water coil shall be used in a chilled water circuit.

1.02 Quality Assurance

- A. Coils shall be designed and tested in accordance with ASHRAE®¹ 15 Safety Code for Mechanical Refrigeration (U.S.A.)
- B. Unit shall be constructed in accordance with UL Standard 60335-1 and 60335-2-40, and shall carry the UL and UL, Canada, labels.
- C. Unit insulation and adhesive shall comply with NFPA-90A (U.S.A.) requirements for flame spread and smoke generation.
- D. Unit shall be manufactured in a facility registered to the ISO 9001 manufacturing quality standard.
- E. Direct-expansion and chilled water coils shall be burst and leak tested at 435 psi.

1.03 Delivery and Storage

- A. Units shall be stored and handled per manufacturer's recommendations.

1.04 Safeties

- A. A2L Refrigerant Leak Dissipation System (Electromechanical):
 - 1. Leak dissipation system shall consist of control board and A2L sensor certified to UL 60335-2-40.
 - 2. System shall be designed for the life of the unit.
 - 3. Dissipation system shall be automatic and disable compressors on 38AX condensing units.
 - 4. Refrigerant leak sensor shall be installed in UL certified location and orientation. Sensor shall be self-correcting and resettable. Single use refrigerant leak sensor shall not be permitted.
 - 5. Factory installed dissipation controller shall use onboard microprocessor and include:
 - a. Automatic reset after a dissipation event has occurred.

- b. Onboard LED with flash code to indicate current unit status and hardware failures.
 - c. Depressible "Test" button to allow for a system test and recall/reset of leak detection history.
 - d. 24V dry contact alarm terminal to allow for external notification of leak detection.
- 6. Dissipation control board shall be accessible via normal maintenance locations and LED shall be visible.
 - 7. Dissipation system shall "Fail Safe" per UL requirements.
 - 8. Dissipation shall allow smoke and building fire systems to override in case of event.

Part 2 — Products

2.01 Equipment

- A. Indoor mounted, draw-thru, packaged air-handling unit that can be used in a suspended horizontal configuration or a vertical configuration. Unit shall consist of a direct drive vane axial fan and motor assembly, pre-wired fan motor controller, factory-installed refrigerant metering devices (direct-expansion coil units), cooling coil, 2 in. (51 mm) disposable air filters, and condensate drain pans for vertical or horizontal configurations.
 - 1. Cabinet shall be constructed of mill-galvanized steel.
 - 2. Cabinet panels shall be fully insulated with 1/2 in. (12.7 mm) fire-retardant material.
 - 3. Unit shall contain non-corroding condensate drain pans for both vertical and horizontal applications. Drain pans shall have connections on right and left sides of unit to facilitate field connection. Drain pans shall have the ability to be sloped toward the right or left side of the unit to prevent standing water from accumulating in pans.
 - 4. Unit shall have factory-supplied 2 in. (51 mm) throwaway-type filters installed upstream from the cooling coil. Filter access shall be from either the right or left side of the unit.
- B. Evaporator Fan and Motor with EcoBlue™ Technology:
 - 1. Direct Drive Evaporator fan motor:
 - a. Shall be an ECM motor design.
 - b. Shall be direct drive design for all static options.
 - c. Shall have permanently lubricated bearings.
 - d. Shall have inherent automatic-reset thermal overload protection.
 - e. Shall have slow ramp up to speed capabilities.
 - f. Shall require no fan/motor belts for operation, adjustments and or initial fan speed set up.
 - g. Shall be internally protected from electrical phase reversal and loss.

1. Third-party trademarks and logos are the property of their respective owners.

2. Evaporator Fan:

- a. Shall be easily set with dedicated selection switch and adjustment pot on unit control board.
- b. Shall provide two stage cooling capacity control, the indoor fan speed is automatically controlled to meet the code-compliant <66% low fan speed and 100% at full fan speed operation.
- c. Blower fan shall be a Vane Axial fan design with fan assembly secured directly to ECM motor. Additional shafts, belts, pulleys/sheaves, and bearing blocks to drive fan shall not be permitted or necessary.
- d. Additional variable frequency drive to control fan motor speed shall not be permitted or necessary. All speed control electronics must be onboard fan motor assembly.
- e. Shall be constructed of a high impact composite material on stator, rotor and air inlet casing.
- f. Shall be a patented / pending design with a corrosion resistant material and dynamically balanced.
- g. Shall have slow ramp up to speed capabilities to help reduce sound and comfort issues typically associated with single speed belt drive systems.
- h. Shall be a slide out design with removal of a few support brackets.

C. Control Box:

1. Shall include an easily accessible Unit Control Board to conveniently and safely provide connection points for vital control functions such as: smoke detectors, phase monitor, economizer, thermostat, and low and high pressure switches. Controller shall also provide an intuitive means to adjust the indoor fan speed through a simple switch and pot adjustment design.

D. Coils:

DX coil is 4-row and consists of copper tubes with sine-wave aluminum fins bonded to the tubes by mechanical expansion. Suction and liquid line connections or supply and discharge connections shall be made on the same side of the coil.

1. Direct-expansion coils shall feature factory installed thermostatic expansion valves (TXVs) for refrigerant control. The TXVs shall be Puron Advance™ R-454B compatible and capable of external adjustment. Coil tubing shall be internally rifled to maximize heat transfer.
2. Chilled water coils shall be rated for an operating pressure of not less than 300 psig (2069 kPag).

E. Operating Characteristics:

1. When combined with matching 38AX condensing unit the system shall be capable of starting and running at ambient outdoor temperatures from 35°F (2°C) to 125°F (52°C) in cooling mode.
2. Unit shall operate at ±10% from rated voltage.

F. Motor:

1. Fan motor of the size and electrical characteristics specified on the equipment schedule shall be factory supplied and installed.
2. Evaporator motors are designed specifically for Carrier and do not have conventional horsepower (hp) ratings listed on the motor nameplate. Motors are designed and qualified in the "air-over" location downstream of the cooling coil and carry a maximum continuous bhp rating that is the maximum application bhp rating for the motor; no "safety factors" above that rating may be applied.

G. Special Features:

1. Alternate Motor and Drive:

An alternate high-static motor shall be available to meet the airflow and external static pressure requirements specified on the equipment schedule.

2. External Paint:

Where conditions require, units shall be painted with an American Sterling Gray finish.

3. Hot Water Coil:

Coil shall be 2-row, U-bend coil with copper tubes and aluminum plate fins bonded to the tubes by mechanical expansion. Coil shall be mounted in a galvanized steel housing that shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 150 psig.

4. Steam Distributing Coil:

Coil shall consist of one row of copper tubes with aluminum plate fins, and shall have inner steam distributing tubes. Coil shall be mounted in a galvanized steel housing and shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 20 psig at 260°F.

5. Electric Heaters:

Heaters for nominal 240v, 480v, or 575v, 3-phase, 60 Hz shall be factory-supplied for field installation as shown on the equipment drawings. Electric heat assembly shall be ETL (U.S.A.) and ETL, Canada, agency approved, and shall have single-point power wiring. Heater assembly shall include contactors with 24-v coils, power wiring, 24-v control wiring terminal blocks, and a hinged access panel. Electric heaters shall not be used with air discharge plenum.

6. Air Discharge Plenum:

Plenum shall be factory-supplied to provide free-blow air distribution for vertical floor-mounted units. A grille with moveable vanes for horizontal or vertical airflow adjustment shall be included. Plenum shall be field-assembled and field-installed on the unit's fan deck for blow-thru air distribution. Plenum shall not be used with electric heaters.

7. Return-Air Grille:

Grille shall be factory-supplied for field installation on the unit's return air opening.

8. Unit Subbase:

Subbase assembly shall be factory-supplied for field installation. Subbase shall elevate floor-mounted vertical units to provide access for correct condensate drain connection.

9. Economizers:

a. Accessory Ultra Low Leak EconomizerONE. (Field-installed) Economizer for ventilation or "free" cooling shall be factory provided for field installation on either return air opening of air handler.

- 1) Integrated, gear driven opposing modulating blade design type capable of simultaneous economizer and compressor operation.
- 2) Damper blades shall be galvanized steel with composite gears. Plastic or composite blades on in-take or return shall not be acceptable.
- 3) Shall include all hardware, actuator and controls to provide free cooling with outdoor air when temperature and/or humidity are below setpoints.
- 4) Shall be equipped with gear driven dampers for both the outdoor ventilation air and the return air for positive air stream control.
- 5) Ultra Low Leak design meets California Title 24 section 140.4 and ASHRAE 90.1 requirements for 4 cfm per sq ft on the outside air dampers and 10 cfm per sq ft on the return dampers.

6) Economizer controller on EconomizerONE models shall be the Siemens POL224 that provides:

- a) Combined minimum and DCV maximum damper position potentiometers with compressor staging relay.
- b) Optional configuration via WLAN stick and Siemens Climatix™1 smart-phone app for easy setup.
- c) Functions with solid-state analog enthalpy or dry bulb changeover control sensing.
- d) LED indication for free cooling, sensor, and damper operation.
- e) One-line LCD interface screen for setup, configuration and troubleshooting.
- f) On-board Fault Detection and Diagnostics (FDD) that senses and alerts when the economizer is not operating properly, per California Title 24, ASHRAE 90.1 and IECC®1.
- g) Sensor failure loss of communication identification.
- h) Capabilities for use with multiple-speed or single speed indoor fan systems.
- i) Digital sensors: Dry bulb and Enthalpy.

10. Overhead Suspension Package:

Package shall include necessary brackets to support units in a horizontal ceiling installation.

11. CO₂ Sensor:

Sensor shall provide the ability to signal the economizer to open when the space CO₂ level exceeds the predetermined setpoint.

12. Condensate Drain Trap:

Trap shall have transparent, service-able design for easy cleaning. Kit shall include overflow shutoff switch and wiring harness for connection to an alarm if desired.

1. Third-party trademarks and logos are the property of their respective owners.

Commercial Packaged Air-Handling Unit

HVAC Guide Specifications

Size Range: **12.5 to 30 Tons, Nominal Cooling**

Carrier Model Numbers: **40RLA (Direct-Expansion Coil) and 40RLS (Chilled Water Coil)**

Part 1 — General

1.01 System Description

- A. Indoor, packaged air-handling unit for use in commercial split systems. Unit shall have a multi-position design and shall be capable of horizontal or vertical installation on a floor or in a ceiling, with or without ductwork. (Only vertical units are to be applied without ductwork.)
- B. Unit with direct-expansion coil shall use Puron Advance™ (R-454B) in a refrigerant circuit with a matching air-cooled condensing unit. Unit with chilled water coil shall be used in a chilled water circuit.

1.02 Quality Assurance

- A. Coils shall be designed and tested in accordance with ASHRAE™¹ 15 Safety Code for Mechanical Refrigeration (U.S.A.)
- B. Unit shall be constructed in accordance with UL Standard 60335-1 and 60335-2-40, and shall carry the UL and UL, Canada, labels.
- C. Unit insulation and adhesive shall comply with NFPA-90A (U.S.A.) requirements for flame spread and smoke generation.
- D. Unit shall be manufactured in a facility registered to the ISO 9001 manufacturing quality standard.
- E. Direct-expansion and chilled water coils shall be burst and leak tested at 435 psi.

1.03 Delivery and Storage

- A. Units shall be stored and handled per manufacturer's recommendations.

1.04 Safeties

- A. A2L Refrigerant Leak Dissipation System (Electromechanical):
 1. Leak dissipation system shall consist of control board and A2L sensor certified to UL 60335-2-40.
 2. System shall be designed for the life of the unit.
 3. Dissipation system shall be automatic and dissipation compressors on 38AX condensing units.
 4. Refrigerant leak sensor shall be installed in UL certified location and orientation. Sensor shall be self-correcting and resettable. Single use refrigerant leak sensor shall not be permitted.
 5. Factory installed dissipation controller shall use onboard microprocessor and include:
 - a. Automatic reset after a dissipation event has occurred.
 - b. Onboard LED with flash code to indicate current unit status and hardware failures.

- c. Depressible "Test" button to allow for a system test and recall/reset of leak detection history.

6. Dissipation control board shall be accessible via normal maintenance locations and LED shall be visible.
7. Dissipation system shall "Fail Safe" per UL requirements.
8. Dissipation shall allow smoke and building fire systems to override in case of event.

Part 2 — Products

2.01 Equipment

- A. Indoor mounted, draw-thru, packaged air-handling unit that can be used in a suspended horizontal configuration or a vertical configuration. Unit shall consist of forward-curved belt-driven centrifugal fan(s), motor and drive assembly, pre-wired fan motor contactor, factory-installed refrigerant metering devices (direct-expansion coil units), cooling coil, 2 in. (51 mm) disposable air filters, and condensate drain pans for vertical or horizontal configurations.
 1. Cabinet shall be constructed of mill-galvanized steel.
 2. Cabinet panels shall be fully insulated with 1/2 in. (12.7 mm) fire-retardant material.
 3. Unit shall contain non-corroding condensate drain pans for both vertical and horizontal applications. Drain pans shall have connections on right and left sides of unit to facilitate field connection. Drain pans shall have the ability to be sloped toward the right or left side of the unit to prevent standing water from accumulating in pans.
 4. Unit shall have factory-supplied 2 in. (51 mm) throwaway-type filters installed upstream from the cooling coil. Filter access shall be from either the right or left side of the unit.
- B. Coils:

DX coil is 4-row and consists of copper tubes with sine-wave aluminum fins bonded to the tubes by mechanical expansion. Suction and liquid line connections or supply and discharge connections shall be made on the same side of the coil.

 1. Direct-expansion coils shall feature factory installed thermostatic expansion valves (TXVs) for refrigerant control. The TXVs shall be Puron Advance™ R-454B compatible and capable of external adjustment. Coil tubing shall be internally rifled to maximize heat transfer.
 2. Chilled water coils shall be rated for an operating pressure of not less than 300 psig (2069 kPag).
- C. Operating Characteristics:
 1. When combined with matching 38AX condensing unit the system shall be capable of starting and

1. Third-party trademarks and logos are the property of their respective owners.

running at ambient outdoor temperatures from 35°F (2°C) to 125°F (52°C) in cooling mode.

2. Unit shall operate at $\pm 10\%$ from rated voltage.

D. Motor:

1. Fan motor of the size and electrical characteristics specified on the equipment schedule shall be factory supplied and installed.
2. Motors rated at 1.3 through 3.7 hp shall have inherent thermal overload protection. Motors rated at 5 hp shall be protected by a circuit breaker.
3. Evaporator-fan motor shall have permanently lubricated, sealed bearings and inherent automatic-reset thermal overload protection or manual reset calibrated circuit breakers. Evaporator motors are designed specifically for Carrier and do not have conventional horsepower (hp) ratings listed on the motor nameplate. Motors are designed and qualified in the "air-over" location downstream of the cooling coil and carry a maximum continuous bhp rating that is the maximum application bhp rating for the motor; no "safety factors" above that rating may be applied.
4. All evaporator-fan motors 5 hp and larger shall meet the minimum efficiency requirements as established by the Energy Policy Act of 1992 (EPACT), effective October 24, 1997.

E. Control Box:

1. Shall include an easily accessible Unit Control Board to conveniently and safely provide connection points for vital control functions such as: smoke detectors, phase monitor, economizer, thermostat, and low and high pressure switches. Controller shall also provide an intuitive means to adjust the indoor fan speed through a simple switch and pot adjustment design.

F. Staged Air Volume System (SAV™) for 2-stage cooling models (standard):

1. Evaporator fan motor.
 - a. Shall have permanently lubricated bearings.
 - b. Shall have a maximum continuous bhp rating for continuous duty operation; no safety factors above that rating.
 - c. Shall be Variable Frequency duty and 2-speed control.
 - d. Shall contain motor shaft grounding ring to prevent electrical bearing fluting damage by safely diverting harmful shaft voltages and bearing currents to ground.
2. Variable Frequency Drive (VFD) Standard:
 - a. Shall be installed inside the unit cabinet, mounted, wired and tested.
 - b. Shall contain Electromagnetic Interference (EMI) frequency protection.

- c. Insulated Gate Bi-Polar Transistors (IGBT) used to produce the output pulse width modulated (PWM) wave-form, allowing for quiet motor operation.
- d. Self diagnostics with fault and power code LED indicator. Field accessory Display Kit available for further diagnostics and special setup applications.
- e. RS485 capability standard.
- f. Electronic thermal overload protection.
- g. 5% swinging chokes for harmonic reduction and improved power factor.
- h. All printed circuit boards shall be conformal coated.

G. Special Features:

1. Alternate Motor and Drive:
An alternate motor and/or medium-static or high-static drive shall be available to meet the airflow and external static pressure requirements specified on the equipment schedule.
2. External Paint:
Where conditions require, units shall be painted with an American Sterling Gray finish.
3. Hot Water Coil:
Coil shall be 2-row, U-bend coil with copper tubes and aluminum plate fins bonded to the tubes by mechanical expansion. Coil shall be mounted in a galvanized steel housing that shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 150 psig.
4. Steam Distributing Coil:
Coil shall consist of one row of copper tubes with aluminum plate fins, and shall have inner steam distributing tubes. Coil shall be mounted in a galvanized steel housing and shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 20 psig at 260°F.
5. Electric Heaters:
Heaters for nominal 240v, 480v, or 575v, 3-phase, 60 Hz shall be factory-supplied for field installation as shown on the equipment drawings. Electric heat assembly shall be UL (U.S.A.) and UL, Canada, agency approved, and shall have single-point power wiring. Heater assembly shall include contactors with 24-v coils, power wiring, 24-v control wiring terminal blocks, and a hinged access panel. Electric heaters shall not be used with air discharge plenum.
6. Air Discharge Plenum:
Plenum shall be factory-supplied to provide free-blow air distribution for vertical floor-mounted units. A grille with moveable vanes for horizontal or vertical airflow adjustment shall be included. Plenum shall be field-assembled and field-installed on the unit's fan deck for blow-thru air

Guide specifications — 40RL**14-30 (cont)

distribution. Plenum shall not be used with electric heaters.

7. Return-Air Grille:

Grille shall be factory-supplied for field installation on the unit's return air opening.

8. Unit Subbase:

Subbase assembly shall be factory-supplied for field installation. Subbase shall elevate floor-mounted vertical units to provide access for correct condensate drain connection.

9. Economizers:

a. Accessory Ultra Low Leak

EconomizerONE. (Field-installed) Economizer for ventilation or "free" cooling shall be factory provided for field installation on either return air opening of air handler.

1) Integrated, gear driven opposing modulating blade design type capable of simultaneous economizer and compressor operation.

2) Damper blades shall be galvanized steel with composite gears. Plastic or composite blades on in-take or return shall not be acceptable.

3) Shall include all hardware, actuator and controls to provide free cooling with outdoor air when temperature and/or humidity are below setpoints.

4) Shall be equipped with gear driven dampers for both the outdoor ventilation air and the return air for positive air stream control.

5) Ultra Low Leak design meets California Title 24 section 140.4 and ASHRAE 90.1 requirements for 4 cfm per sq ft on the outside air dampers and 10 cfm per sq ft on the return dampers.

6) Economizer controller on EconomizerONE models shall be the Siemens POL224 that provides:

a) Combined minimum and DCV maximum damper position potentiometers with compressor staging relay.

b) Optional configuration via WLAN stick and Siemens Climatix™ smartphone app for easy setup.

c) Functions with solid-state analog enthalpy or dry bulb changeover control sensing.

d) LED indication for free cooling, sensor, and damper operation.

e) One-line LCD interface screen for setup, configuration and troubleshooting.

f) On-board Fault Detection and Diagnostics (FDD) that senses and alerts when the economizer is not operating properly, per California Title 24, ASHRAE 90.1 and IECC®¹.

g) Sensor failure loss of communication identification.

h) Capabilities for use with multiple-speed or single speed indoor fan systems.

i) Digital sensors: Dry bulb and Enthalpy.

10. Overhead Suspension Package:

Package shall include necessary brackets to support units in a horizontal ceiling installation.

11. CO₂ Sensor:

Sensor shall provide the ability to signal the economizer to open when the space CO₂ level exceeds the predetermined setpoint.

12. Condensate Drain Trap:

Trap shall have transparent, serviceable design for easy cleaning. Kit shall include overflow shutoff switch and wiring harness for connection to an alarm if desired.

13. Adaptive Dehumidification System:

The Adaptive Dehumidification System shall be factory-installed and shall provide greater dehumidification of the occupied space by providing a mode of dehumidification operation in addition to its normal design cooling mode:

a. Subcooling mode further sub cools the hot liquid refrigerant leaving the condenser coil when both temperature and humidity in the space are not satisfied.
